

## TR48-CG-SM01 Threading Machine

- TR48-CG-SM01 threading machine is mainly used to pass wires through a rubber waterproof hole in a housing. It is especially suitable for the scenarios where the waterproof hole is very tight.
- The equipment can be customized for different tooling according to the size of the housing, the number and distribution of the wires passing through, and can insert different numbers of wires into different types of housing.

### SPECIFICATIONS

Main Station Size	610L, 450W, 150H (mm)
Power Supply	AC220V, 50HZ
No. of housing that can be processed simultaneously	10 pieces
Cycle time	40s

### about us

Trivers Shanghai, established in 2007 by Trivers Australia, has a series of over 10 products in robotic production lines & wire harness assembly automation backed by patents. It is an authorized supplier to several Fortune 500 companies, is an executive member of the Shanghai Robot Alliance, and is a key member of government R&D projects.
